

"The Durand™ is a fully patented, two part device that enables the user to successfully remove older and fragile wine corks whole and intact.

Using The Durand for older, fragile or compromised corks eliminates the unwanted outcomes of broken corks, corks pushed into bottles or corks partially removed leaving pieces floating in the wine.

Numerous wine lovers, collectors, and nationally and internationally known sommeliers have enjoyed The Durand's performance and appreciated its proven track record."

Unlock the Majesty of Mature Wines

1. Screw HELIX into center of cork until STABILIZER BAR rests against top of cork (or bottle).

2. With BLADES on either side of STABILIZER BAR, insert first the "long" then "short" BLADE between the cork and bottle.

3. Work the BLADES down between the cork and bottle by pressing down alternately over each BLADE using the HANDLE. Continue this "rocking" motion until the bottom of the HANDLE rests against the top of the STABILIZER BAR.

4. Hold the bottle securely. With the other hand grasp the STABILIZER BAR and HANDLE together and twist, then pull upward slowly continuing to twist to remove the cork.
